Carbon Reduction Plan

Supplier name: Apexiar Limited

Publication date: 28/06/2026

Commitment to achieving Net Zero

Apexiar Limited is committed to achieving Net Zero emissions by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 1 October 2025 - 28 June 2026	
Additional Details relating to the Baseline Emissions calculations.	
This is Apexiar Limited's first Carbon Reduction Plan and uses the report period 1 October 2025 to 28 June 2026 as the baseline emissions footprint. Apexiar is a small UK software development and technology company supporting regulated and safety-critical sectors. The company does not operate owned offices, manufacturing facilities, warehouses, plant, or a company vehicle fleet. As a result, Scope 1 and Scope 2 emissions are currently reported as zero. Emissions are therefore primarily captured within relevant Scope 3 categories. The baseline emissions were calculated using the Small Business Carbon Calculator v2.0, powered by Equipoise, and the emission report was created on 28 June 2026. The estimated total emissions for the reporting period are 3.06 tonnes CO_2e. The Scope 3 categories included in the baseline are: Category 1 - Purchased goods and services; Category 5 - Waste generated in operations; Category 6 - Business travel; Category 7 - Employee commuting and homeworking; and Category 8 - Upstream leased assets. The following Scope 3 categories have been excluded where they are not applicable to Apexiar Limited for this reporting period: Category 2 - Capital goods; Category 3 - Fuel and energy related activities; Category 4 - Upstream transportation and distribution; Category 9 - Downstream transportation and distribution; Category 10 - Processing of sold products; Category 11 - Use of sold products; Category 12 - End-of-life treatment of sold products; Category 13 - Downstream leased assets; Category 14 - Franchises; and Category 15 - Investments.	
Baseline year emissions:	
EMISSIONS	**TOTAL (tCO_2e)**
Scope 1	0

Scope 2	0
Scope 3 (Included Sources)	The following categories account for Apexiar Limited's Scope 3 emission figures: Category 1 - Purchased goods and services: 1.86 tCO2e Category 5 - Waste generated in operations: <0.01 tCO2e Category 6 - Business travel: 0.02 tCO2e Category 7 - Employee commuting and homeworking: 1.17 tCO2e Category 8 - Upstream leased assets: 0.01 tCO2e Total Scope 3 emissions: 3.063 tCO2e
Total Emissions	3.06

Current Emissions Reporting

Reporting Year: 1 October 2025 - 28 June 2026	
EMISSIONS	**TOTAL (tCO2e)**
Scope 1	0
Scope 2	0
Scope 3 (Included Sources)	The following categories account for Apexiar Limited's Scope 3 emission figures: Category 1 - Purchased goods and services: 1.86 tCO2e Category 5 - Waste generated in operations: <0.01 tCO2e Category 6 - Business travel: 0.02 tCO2e Category 7 - Employee commuting and homeworking: 1.17 tCO2e Category 8 - Upstream leased assets: 0.01 tCO2e Total Scope 3 emissions: 3.063 tCO2e
Total Emissions	3.06

Emissions reduction targets

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

Apexiar Limited is a developing SME and recognises that emissions may fluctuate as the business grows, takes on new customers and undertakes more client-facing activity. Our reduction plan therefore focuses on maintaining a low-carbon operating model, reducing avoidable travel, choosing lower-carbon suppliers, and reducing emissions intensity as the company scales.

Using the 2025/26 baseline of 3.06 tCO2e, Apexiar Limited will seek to reduce absolute emissions by at least 25% by 2029, where operationally practicable, and to halve emissions intensity by 2030. The company will review and update this target annually as more complete annual data becomes available.

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or are in progress since the baseline was established:

Apexiar Limited has already adopted a low-carbon operating model, with emissions primarily limited to purchased goods and services, homeworking, limited business travel and low levels of operational waste.

- Reviewed cloud service providers for renewable energy usage and environmental commitments.

- Embedded digital-first delivery and collaboration to reduce unnecessary printing, postage and travel.

- Adopted a paper-light approach, with documents, proposals, support material and customer engagement managed digitally wherever practicable.

- Avoided routine branded merchandise and, where promotional materials are needed, committed to sustainable or digital alternatives.

- Made sustainability considerations part of business planning, future recruitment and supplier selection.

- Promoted virtual meetings and remote working to reduce commuting and travel emissions.

In the future we intend to implement further measures, including:

- Continue to review software, cloud and IT suppliers for renewable energy commitments and wider sustainability performance.

- Formalise a sustainable travel approach that prioritises virtual meetings, rail travel and consolidated customer visits where practical.

- Improve annual emissions data collection, including purchased services, homeworking, business travel and any subcontractor activity.

- Encourage homeworking energy efficiency and use of renewable energy tariffs where practical.

- Maintain a low-waste, low-paper operating model and avoid single-use plastics in company activity and events.

- Review carbon offsetting options only for residual emissions that cannot reasonably be reduced or avoided.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard, using appropriate Government emission conversion factors for greenhouse gas company reporting where applicable.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements. The required subset of Scope 3 emissions has been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:
